DCID 1/2 User Survey

<u>Defense Intelligence Agency</u>

1. What is the nature and frequency of your organization's use of the U.S. foreign intelligence requirements categories and priorities that are promulgated in the Attachment to the DCID 1/2?

The DIA S&T intelligence managers make some use of the DCID 1/2 to establish priorities for collection support and to review collection requirements of the DoD S&T intelligence production centers, primarily in the SIGINT area.

In the past very limited use has been made of the DCID 1/2 in programming, budgeting, and allocating DoD S&T intelligence production resources. The driving element for programming and budgeting has been the Defense Intelligence Plan (DIP). Currently, emphasis is being placed on a combination of DCI goals, the DIP, and various other DoD guidance documents. Beginning with the FY 84-89 program and subsequent program and budget submissions, it is anticipated that more use will be made of DCID 1/2 subjects/priorities.

The DCID 1/2 is used indirectly as a source of guidance for developing DoD S&T intelligence production priorities. The priorities themselves are derived primarily from the Intelligence Priorities for Strategic Planning (IPSP). To the extent that this document is consistent with the DCID 1/2, the latter provides a national-level basis for the more detailed scheme set forth in the IPSP.

From a DoD S&T intelligence program management perspective, the generally limited direct use of DCID 1/2 may be attributable to the "broad brush" approach given military subjects in DCID 1/2.

2. What changes in DCID 1/2 content and/or procedures would make it more useful to your organization?

Use the JCS produced Intelligence Priorities for Strategic Planning (IPSP) as the basis for military subject/priorities in DCID 1/2.
